Yes, another fun title from Artifex Mundi! This one plays with 'worlds within the world' as you enter dream scenarios in order to solve puzzles to help you back in 'reality'. \*\*\*\*. The Yosumin are playful, cute little shapes, and they must be scoured from the Earth at all costs. Thousands upon thousands will be obliterated at your hands, and yet they will keep coming, for they are innumerable, and manic in the safety of their uncountability. Understanding of the labyrinthine plot and its implications for both the Yosumin and this world is not a requirement for enjoying this colourful little game, but it helps.. A pug, a penguin, and a cat  
Went a jumping, fancy that  
In desert, fields, and the snow  
That's really all you need to know

It's sold at a decent price  
And the game is rather nice  
You'll always want to top your score  
Which will keep you playing more. This is a fun, story-based adventure game. In a post-apocalyptic frozen wasteland, you must lead your adopted family of survivors. It is hard to say much more without spoiling it, but it is very heavy on story. The gameplay is mostly about finding good spots to scavenge, which is simple and typically easy. The battle system is strange but a nice change once you get the hang of it. Overall I can definitely recommend this game!. so far i enjoy playing this game i havent found any game breaking bugs or encountered any unfair mechanics  
well expt that the first boss just doesnt want to die  
but aside from that money well spent

it well worth the 16€ i payed for it

Short, lovely action-puzzle. Finished it in about 3 hrs, but meanwhile it gave me a solid kick. Story is touching, gameplay is engaging and after 3 hrs you have good memories and no regrets.. Okay, so you're constantly falling in this cool-looking creepy space, but you can't actually see anything because you only get glimpses every few seconds, and then you randomly die to something you couldn't see. Repeat this experience several dozen times and that's basically the game.

I wanted to like this -- I love cosmic horror and the atmosphere is great -- but as a game it's repetitive, boring, frustrating, and riddled with bugs. Just STARTING the game required me visiting the forums because a bug had me hovering 500 feet over the clickable menu items. Unless you really want a cheap VR experience you enjoy for ten minutes or so, hard pass. Sorry.. I have the Season Pass so I get all of the expansions. That's the way to go as the content has been quality. This is one of my favorite expansions for this game. It changes up the gameplay which is nice. No regrets on the Season Pass!. Good ideas, not well explored, bland execution.

The basic premise of the game holds promise - providing lots of opportunity for creative variety in gameplay - but the devs only explored a small portion of the space of possibilities. The end result is a game that quickly becomes tiresome. In essence, it's just a glorified version of Peggle. If you want a mindless, casual, timewaster, then you may enjoy this game. If you want something rich, strategic, or creative, look elsewhere.. I first discovered Rfactor when I was at a car fair that had an F1 simulator. So when I went over to have a go I enjoyed the F1 car model and the sim that came with it. Since then I was clueless to know what the name of the software it was using until now when one day I was looking through Steam and when I randomly found it I said to myself "Hang on! This is the same sim that the F1 simulator was using!!" So I downloaded it, installed it on to my computer and gave it a go out of the box and it became my main racing sim ever since.

"My thoughts on Rfactor"

It's very customisable and has lots of features compared to other Racing Sims I've played and has the best driving physics I have seen in a long time. It has a lot of support from its fanbase and has plenty of Mods on Rfactor central with new ones still being released for it to this day and if you use Windows 10 like myself then fear not you can still play it. You can even drive in and out of the pit lane manually, very few racing sims let you do this but Rfactor is one of them that gives you the option to drive in and out of the pitlane by yourself or let it do it for you.

The only thing I have against it is the AI but don't get me wrong Rfactor's AI is great and fun to race against but it really depends on the track you're racing on and how you have it configured. You will have to do a lot of configuring to the AI to get exciting races from them. There are times when they will overtake with ease which is mainly at sharp bends but on the straights they sit behind the other car until the end of the straight in which it does ruin the experience a little bit. One time I was right behind a car which is an AI car and it was sitting behind the other car on the straight and he was just sitting there and not overtaking him while slightly braking behind him when I got the slipstream from both cars and passed both of them with ease.

Overall I enjoyed Rfactor and I clocked 270 Hours of this sim at the time of writing this review with tons of Mods ranging from GT, Prototype and even F1 mods. I recommend getting the mods from Rfactor central because there is a lot of content to choose from there.

Overall Rating: 9/10. Good SNES remake.. This is a game was not one of my better choices of buying. Played for about 15 minutes, then sat looking at the game for the next 45 minutes trying to figure out what the crap I was smoking when I purchased this game. Oh me. You can be dumb at times. Look, if you are undecided when it comes to buying this game, just, no. Don't. Don't be me. It's boring and just stupid. The developers and this game are not worth your money or your time. Now run along and buy something that is worth your money and time. Good day to you sir or ma'am.. I have taught sword fighting for 20 years. This game is the closest to the real thing of all the games I have tried. It is the one that causes me to fight in a way that is most realistic. Actual techniques work. No other game is really accomplishing this and I have tried several in VR. It's also an amazing work out. I really hope more complexity is added and different environments, new music etc. I will also enjoy if the opponents learn some new moves and more complex strikes. I'd really love it if the opponents would respond to fakes and deception since that is a hallmark of real fighting. I should be able to deceive them and vice versa. One of the best things about this game is that your enemy reacts to your strikes and shield hits to give you openings like in a real fight. Many other games just don't reflect the force with which you shield bash or etc and allow openings to be created. I also appreciate that this game doesn't try to emulate running around and your movement is limited to the arena box, it feels the most realistic so you aren't having to ever move with anything other than your real body. This is not a limitation, it's a feature.. I am very happy to be paying for this new expansion pack. The developers fully deserve it for all the hard work they've put into the game.

Game not yet working with mods (♥♥♥♥♥ wood etc) but I have no doubt patches will fix all this.

Love the new architecture

#### Cons

The language the civs speak is still kinda shoddy in places but this is coming from a professional linguist and doesnt remove from the enjoyment of the game.. I played this game when I was younger and I looked everywhere for it. I was so excited when it finally popped up on steam that I had to get it. Definitely no disappointment here.
